**WEATHER DISCUSSION:** Cloudy and relatively cool conditions will continue through the operational period. At this time...no significant precipitation is expected on the fire. However...there will likely be some thunderstorms developing to the east...and outflows from these storms could generate gusty and erratic winds across the fire through the operational period.

On Wednesday...clouds will diminish across the area...with mostly clear skies...warmer and drier conditions expected Thursday and Friday. Typical diurnal winds are expected across the slopes and valleys with a general northwesterly flow at the ridgetops.

## INPUTS

### WEATHER SUMMARY

Cooler temperatures and higher relative humidity will move into fire area. Winds should be from the Southeast in the am switching to the Southwest after 11am. We will see a chance of thunderstorms over the Trinity Alps, this could bring erratic, shifting winds to the incident from the east. The inversion that has dominated the area still has a possibility of remaining hampering visibility. **WATCH OUT FOR OUT FLOW FROM THUNDERSTORMS FROM THE EAST**

## OUTPUTS

### FIRE BEHAVIOR

#### GENERAL

Probability of Ignition = 36%.

Spotting Distance= 1/3 mile

Energy Release Component in Timber Fuels are at 90<sup>th</sup> percentile levels or above.

Live Fuel Moisture= CHAMISE (50-60%) MANZANITA (75-80%)\*\*\*Both at Critical level\*\*\*

The fire continues to consume timber understory with some isolated tree torching. Rollout and slope reversal still continue to make more active runs and may challenge control lines. The fire area has no fire history in the last 50 years and no known thinning or fuel modification. Nighttime firing operations have been successfully consuming fuel under high relative humidity.

#### SPECIFIC

##### Branch I

Interior island in steep terrain may send burning material over control lines. Depth of previous burn operations may not be tested if jackpots of unburned become active. Torching trees will send broadcast embers up to 1/3 of a mile. The fire has not yet been affected by any substantial wind and any out flow from the east will increase activity in previously quiet areas of the incident.

##### Branch II

Crews working on indirect line need keep a lookout toward the main fire to ensure they have enough reaction time to travel to safety zone. Rolling material and slope reversal continued to aid in moderate runs that may compromise crews and control lines. Look for the rates of spread up to **14 ch/h** and flame lengths up to **9 ft**. Spotting from torching trees could send embers out to **1/3 of mile**. If the outflow from thunderstorms to the east surface expect rates of spread and flame lengths to dramatically increase. Winds will be erratic and unpredictable so all personnel should monitor for changes in the weather and plan accordingly. Any night firing operations can expect max relative humidity up to 80% between 2300 and 0400 this may not allow for complete consumption and potential for re-burn will be possible.

##### Branch IV

Establish spot fires on the east side of the Eel River they may push toward crews working on indirect line on Division P, W and Y. Rates of spread can be up to **14ch/h** and have **9 ft** flame lengths. No crown fire is predicted but if out flow from thunderstorms surfaces and becomes aligned with slope a transition to a crown is possible. A crown run could threaten crew working on indirect line. Any night firing operations can expect max relative humidity up to 80% between 2300 and 0400 this may not allow for complete consumption and potential for re-burn will be possible.

### AIR OPERATIONS:

Watch for erratic winds possible from out flow from thunderstorms from the east  
Inversion may not lift making visibility poor and may restrict air operations.

## SAFETY

- **Plan your escape routes on worst case fire behavior situations**
- **Don't assume that low fire activity in the beginning of your shift will remain consistent**
- **Rollout and slope reversal have challenged suppression efforts each operational period, identify the potential for changing fire spread**

# **SAFETY MESSAGE**

## **“LODGE COMPLEX”**

**14-CA-MEU-007202 August 5, 2014 0700-0700**

## **DRIVING CONDITIONS**

**ONE WAY IN ONE WAY OUT!**

**Poor visibility, narrow roadways and steep terrain all align for dangerous driving conditions.**

- Smoke inversion layer during day and nighttime.
- Unexpected change in roadway slope.
- Little to no turnouts.

**Mitigation – Expect the unexpected**

- Drive with extreme caution.
- Lights on, slow and expect vehicles from the opposite direction.
- Use a spotter as necessary.

## **TOPOGRAPHY**

**TOUGH COUNTRY TO WORK IN!**

**Be on the lookout for topography driven fire conditions, loose rocks and boulders throughout the incident area.**

- Steep slopes may cause rolling material hazards.
- This terrain will cause quick, unexpected upslope fire behavior.
- Significant slip hazard exist throughout the incident.

**Mitigation – Maintain high level of situational awareness.**

- Post lookouts and monitor changes in fire behavior.
- Watch out in areas with steep slopes and watch your footing.
- Listen for rolling rocks and boulders and ‘yell out’ to others around you.

## **SNAGS / KILLER TREES**

**AS THE FIRE REACHES CONTROL LINES THE POTENTIAL RISK INCREASES**

**The fire has had a significant impact to the health and stability of trees**

- Ground cover has burned losing the stability of the root system.
- Heavy timber dominates the fire area creating a high risk for snags and tree fall.
- Expect tree falling operations.

**Mitigation– Be on the lookout for hazard trees and situations**

- Only qualified personnel shall remove the hazard if safe to do so.
- Consider all canopy covered fireline to be hazardous.
- Utilize hazard flagging and make the location know to your line supervisor.

# CAL FIRE

## WATER USAGE PLAN

### *California Drought Emergency*

The following shall be considered and implemented by all fire resources as a means to provide maximum efficiencies when utilizing water resources, while minimizing the impacts to private and public water supplies. Accountability shall be maintained for all water supplies that are utilized and care should be applied to ensure proper replacement and/or reimbursement to the supplier/owner.

#### **Fireline personnel-** (During mop up operations)

- Use Pencil Hose and Garden Nozzles with Shut-Offs.
- Use Back pumps.
- Use Dry Mop-up and consolidation of heavy fuels to areas where they can burn out safely.
- Locate/Relocate Firelines to lighter fuels or natural barriers when safe.
- Set up and use portable tanks in anticipation of longer transport times for Water Tenders.
- Use of foams, gels and other water enhancers.
- Evaluate need to mop up in excess of 200 feet from fireline.

#### **Road Maintenance and Repair-**

- Monitor and water roads only when and where needed.
- Water when most effective (evening and nights).
- Use chemical treatments when available (Magchloride, Omni bind etc.).
- Consider use of tertiary or treated water.

#### **Aviation Operations-**

- Consider use of Gels, Foams and Retardants. Set up portable plants.
- Consider using Blivits and Pencil Hose for interior mop up operations as opposed to numerous bucket drops.
- Establish and use pre-use agreements for existing and known water sources.
- Use large watershed dip sites when able. Minimize use of small, static ponds and lakes.
- Maintain accountability of water used and locations of dip sites.
- Evaluate need for interior bucket drops.

#### **Private Water Supplies-**

- Notify property owner as early as possible.
- Minimize usage and develop alternative water supplies when and where appropriate.
- Track usage (meter, ICS-214 Water Usage Reports) and develop a plan to replace water.
- Make arrangements for reimbursement and damage claims if needed.

#### **Public/Municipal Water Supplies-**

- Notify Agency as soon as possible and request a representative to the incident.
- Identify fill areas and request metering devices. Note locations on incident map.
- Use alternative or reclaimed water sources when available. Note locations on incident map.
- Make arrangements for reimbursement and damage claims if needed.

#### **Management and Supervision-**

- Use leaders intent and establish Water Conservation as a Management Objective.
- Consider complexity of water use on incidents. Establish a Water Supply Group Supervisor to coordinate additional resources to support the incident needs.
- Complete the Water Usage Report daily and turn in to Finance.
- Review this check list and brief daily.
